About CaReMeL0

Cardiac disease, chronic kidney and liver disease and metabolic derangements like type 2 diabetes (T2DM) and their risk factors share etiologies and pathophysiologic mechanisms. These novel insights and their therapeutic implications have been recognized and adopted by cardiology, nephrology and endocrinology alike. Yet a need exists for a multidisciplinary scientific platform that unites all interested parties and serves as a unique gathering, devoting time to in-depth Cardiovascular, Renal, Liver, Metabolic and Obesity discussions.

The conference will continue to spotlight the pivotal role of family physicians in the integrated management of cardio-renal-metabolic (CRM) syndrome, steatotic liver disease, and obesity (CaReMeL0), with an enhanced focus on the SGLT2Inb, GLP-1R agonist and the dual GIPR/GLP-1R agonist.

Conference Highlights

Expanded Sessions

Dedicated tracks on the use of GLP-1 receptor agonists, highlighting their clinical benefits, patient selection, and real-world application in treating obesity.

Collaborative Workshops

Sessions on fostering a multidisciplinary approach to patient care, featuring insights into successful collaboration between family physicians, endocrinologists, cardiologists, nephrologists, and allied health professionals.

Expert Insights

Hear from a distinguished panel of speakers, as well as leading family physicians on cardiometabolic health and the role of the family physician.

Innovative Learning

Case-based discussions, interactive workshops, and hands-on training sessions designed to enhance practical skills.

Networking

Ample opportunities for one-on-one interactions, group discussions, and partnership development, with a focus on fostering collaborations that transcend national borders within Europe.
